The figures in the foregoing paragraphs are based on the returns of federally registered companies. The Department has continued the practice of collecting information from companies and societies operating under provincial jurisdiction only. The figures have been kindly furnished by the companies and societies in response to a circular letter issued by the Department and while replies have not been received from all of them, the omissions are not believed to be important. These figures have been incorporated in the following table to show the total life insurance in Canada for 1983 on a direct basis.

**Canadian Companies: Investments under Subsection 63(4),
of the Canadian and British Insurance Companies Act**

In 1948, the Canadian and British Insurance Companies Act was amended establishing a "Basket Clause". This permits Canadian companies to acquire investments not falling within regularly prescribed classes. The original limit on such investments was 3% of the total book value of a company's assets. Further amendments altering the limits were made in 1961, 1965 and 1977. The current limits, as a percentage of the total book value of a company's assets, are 7% for investments other than real estate and 7% for real estate. Of the investments in real estate, a limit of 2% may be non-income producing.

Policy Loans (All Companies)

During the ten years 1929-1938 there appeared in the Reports a summary of the trend of policy loans and the ratio of policy loans to policy reserves at intervals since the year 1910. The figures in the report of 1938 show that, for some years up to 1928, the ratio of loans to reserves in Canada for all companies was quite uniform at about 15%; that thereafter a marked increase in the volume of loans and in the ratio occurred to a maximum ratio of 20.9% in 1932, and that a gradually reducing ratio was shown from the latter year until 1938 when it reached 15.8%. The ratio declined to a level of 5.8% in 1949 then varied between 4.8% in 1965 and 6.8% in 1978. The ratio for 1983 was 7.1% determined as follows:

Life Insurance

GENERAL REMARKS

During 1983, the volume of life insurance in force in Canada issued by federally registered life insurance companies and fraternal benefit societies continued a trend of growth. The net amount of life insurance in force in Canada at the end of 1983 stood at \$572 billion, recording an increase of 11% over the corresponding figure for 1982. Of this total volume in force, \$329 billion, or 58%, represented insurance issued under group contracts. The net amount of individual insurance in force in Canada at the end of 1983 was \$243 billion.

Virtually all of the group insurance in force takes the form of term protection. However, the proportion of individual insurance in force that takes the form of term protection is also significant. Ignoring reinsurance, it is estimated that 57% of the amount of individual insurance in force in Canada is of the term variety. With the high popularity of term insurance, the percentage of newly effected individual insurance in Canada that takes the form of term protection is even higher. Ignoring the effect of reinsurance and excluding business issued by fraternal benefit societies, it is estimated that 66% or \$46.6 billion of the \$71.0 billion of the total newly effected individual insurance in Canada took the form of term insurance or temporary additions.

Total net premiums for life insurance in Canada (excluding premiums or considerations for annuities), were \$3.7 billion for 1983; of this, \$2.5 billion, or 68%, was paid under individual contracts, the balance being accounted for by group contracts. Canadian incorporated companies accounted for 74% of the net premiums for life insurance in Canada as compared to 74% and 72% for the two preceding years.

Newly effected individual life insurance issued in Canada, net of all reinsurance, was \$58.5 billion in 1983; this represents an increase of 12% over the 1982 figure as compared to an increase of 18% for the previous year. The net amount of new group insurance coverage issued during the same period was \$36.4 billion or 7% over 1982 as compared to 24% growth in the previous year.

The total net premium income in Canada for life insurance including annuities amounted to \$7.8 billion, an amount slightly lower than that in 1982. Of this, \$4.1 billion, or 52% of the total, represented considerations for annuity contracts. In 1980 and prior years, annuity premiums represented less than 50% of total life company premium income. Of the 1983 total of \$4.1 billion, \$1.9 billion or 46% represented premiums received under individual annuity contracts with the remaining \$2.2 billion, or 54%, arising from group annuity contracts issued to employers wishing to provide pension benefits to their employees.

As respects dividends to participating insurance and annuity policyholders in Canada, a total of \$756 million was paid or credited to their accounts in 1983. This figure represented an increase of 3% over that for 1982.

Accident and Sickness Insurance transacted
by life insurance companies

Net written premiums in Canada for accident and sickness insurance transacted by life insurance companies in 1983 grew to \$2.22 billion, an increase of 8% over 1982. The assets supporting the accident and sickness business in Canada increased by 11% during the year and stood at \$3.50 billion at the end of 1983.

The net claims ratio on accident and sickness business in Canada, which measures the relationship of the net claims incurred to net premiums earned, decreased to 92% in 1983 from 95% in 1982.

Respectfully submitted,

R.M. Hammond,
Superintendent of Insurance.

Les chiffres des paragraphes précédents se fondent sur les déclarations des compagnies enregistrées auprès du gouvernement fédéral. Le Département a maintenu l'usage de recueillir des renseignements des compagnies et sociétés dont le fonctionnement relève de l'administration provinciale seulement. Les compagnies et sociétés ont eu l'obligance de fournir les chiffres en réponse à une lettre circulaire émise par le Département; des réponses n'ont pas été reçues de toutes les compagnies et sociétés mais les omissions ne sont pas jugées importantes. Les chiffres ont été incorporés dans le tableau suivant qui fait état du total de l'assurance-vie au Canada pour l'exercice 1983 sur une base directe.

**Compagnies canadiennes: Placements en vertu du paragraphe 63 (4) de la
Loi sur les compagnies d'assurance canadiennes et britanniques**

En 1948, la Loi sur les compagnies d'assurance canadiennes et britanniques a été modifiée afin d'établir la «Clause Omnibus». Cette clause permet aux compagnies canadiennes d'acquiescer des placements en plus des catégories régulièrement prescrites. La limite initiale sur ces placements était de 3% de la valeur comptable totale de l'actif de la compagnie. D'autres changements ont été apportés en 1961, 1965 et 1977 afin de modifier les limites. Les limites actuelles en pourcentage de la valeur comptable totale de l'actif de la compagnie sont 7% pour les placements autres que les biens-fonds et 7% pour les biens-fonds. Une limite de 2% peut comprendre les placements en biens-fonds non productifs de revenus.

Avances sur polices (toutes les compagnies)

Pendant dix années, soit de 1929 à 1938, un résumé de la tendance des avances sur polices et du rapport entre les avances sur polices et les provisions actuarielles depuis 1910 était inclus dans les rapports. Le rapport de 1938 indique que pendant plusieurs années, soit jusqu'à 1928, le rapport entre les avances et les réserves au Canada pour toutes les compagnies se maintenait de façon très uniforme à 15% environ. Il s'est ensuite produit une augmentation marquée du total des avances et du rapport; celui-ci a touché un maximum de 20.9% en 1932 après quoi il a baissé graduellement pour atteindre 15.8% en 1938. Le rapport est descendu à 5.8% en 1949, et a ensuite varié entre 4.8% en 1965 et 6.8% en 1978. Le rapport en 1983 était de 7.1% et a été établi comme suit:

Assurance-Vie

OBSERVATIONS D'ORDRE GENERAL

En 1983, le volume de l'assurance-vie en vigueur au Canada, émise par les compagnies d'assurance-vie et les sociétés de secours mutuels enregistrées aux termes de lois fédérales, a maintenu une courbe ascendante. A la fin de 1983, le montant net de l'assurance-vie en vigueur au Canada s'établissait à 572 milliards \$, enregistrant une hausse de 11% par rapport au montant correspondant pour 1982. Sur ce montant total d'assurance-vie en vigueur, 329 milliards \$, soit 58%, représentaient de l'assurance émise aux termes de contrats collectifs. Le montant net de l'assurance individuelle en vigueur au Canada, à la fin de 1983, s'élevait à 243 milliards \$.

La quasi-totalité de l'assurance collective en vigueur représente de l'assurance temporaire. Toutefois, le volume d'assurance individuelle en vigueur représentant de l'assurance temporaire est également important. Abstraction faite de la réassurance, on estime que 57% du montant de l'assurance individuelle en vigueur au Canada constitue de l'assurance temporaire. Etant donné la grande vogue de l'assurance temporaire, le pourcentage des nouvelles polices d'assurance individuelle émises au Canada et représentant de l'assurance temporaire est encore plus élevé. Abstraction faite également de l'effet de la réassurance et excluant les affaires relatives aux sociétés de secours mutuels, on estime que, 66% soit 46.6 milliards \$ du total de 71.0 milliards \$ de la nouvelle assurance individuelle souscrite au Canada est constitué d'assurance temporaire ou de suppléments provisoires.

Les primes nettes d'assurance-vie au Canada (à l'exclusion des primes ou constitutions de rentes) ont totalisé 3.7 milliards \$ pour 1983; de ce montant, 2.5 milliards \$, soit 68%, ont été payés aux termes de contrats individuels, le montant résiduel étant justifié par des contrats collectifs. Les compagnies constituées en corporation au Canada ont représenté 74% des primes nettes d'assurance-vie au Canada comparativement à 74% et 72% pour les deux années précédentes.

La nouvelle assurance-vie souscrite au Canada, déduction faite de toute la réassurance, s'est élevée à 58.5 milliards \$ en 1983; cela représente une hausse de 12% par rapport au chiffre de 1982 et comparativement à une hausse de 18% pour l'année précédente. Le montant net de la nouvelle assurance collective souscrite pendant la même période a été de 36.4 milliards \$, soit 7% par rapport à 1982 et comparativement à une augmentation de 24% pour l'exercice précédent.

Le revenu-primes net au Canada de l'assurance-vie, y compris les rentes, a totalisé 7.8 milliards \$, soit un montant légèrement inférieur à celui de 1982. Sur ce montant, 4.1 milliards \$, soit 52% du total, représentaient des primes de contrats de rente. En 1980 et pour les années antérieures, les primes de rentes représentaient moins de 50% du revenu-primes total des compagnies d'assurance-vie. Sur le total de 4.1 milliards \$ pour 1983, le montant de 1.9 milliard \$, soit 46%, représentait des primes reçues aux termes de contrats individuels de rente et le montant résiduel de 2.2 milliards \$, soit 54%, provenait de contrats collectifs de rente émis aux employeurs désireux de procurer des prestations de pension à leurs employés.

En ce qui concerne les dividendes versés aux porteurs de polices d'assurance à participation et de contrats de rente au Canada, un total de 756 millions \$ a été payé ou crédité à leurs comptes en 1983. Ce chiffre représentait une hausse de 3% par rapport à celui de 1982.

Opérations d'assurance accident et maladie
pratiquées par les compagnies d'assurance-vie

Les primes nettes souscrites au Canada en 1983, pour ce qui est des opérations d'assurance accident et maladie pratiquées par les compagnies d'assurance-vie, se chiffraient à 2.22 milliards \$, soit une augmentation de 8% par rapport à 1982. L'actif maintenu au Canada à l'appui des opérations d'assurance accident et maladie a augmenté de 11% pendant l'année et s'est établi à 3.50 milliards \$ à la fin de 1983.

Le taux des réclamations nettes des affaires d'assurance accident et maladie au Canada, lequel mesure la proportion des réclamations nettes, soumises ou non, par rapport aux primes gagnées nettes, est passé de 95% en 1982 à 92% en 1983.

Respectueusement présenté,

Le surintendant des Assurances,
R.M. Hammond.

ILLUSTRATIVE DIVIDENDS TO POLICYHOLDERS

In previous reports, it has been the practice to publish under the above heading, for each company issuing participating policies, information on premiums charged and on dividends paid during the year under review for participating whole life, 20-payment life and 20-year endowment policies issued 3, 6, 9, 12 and 15 years prior to the year under review. Figures were published for policies issued at ages 25, 35, 45 and 55. Companies were required to provide this information in the annual statement filed with the Department.

When the statement form was revised in 1978, the format of the information required regarding premiums and dividends was changed. Companies are now required to provide the following information in respect of a whole life participating policy for \$10,000, a whole life non-participating policy for \$10,000, and a 5-year renewable and convertible term insurance for \$100,000:

- (1) the annual premium charged on such policies currently being issued at ages 25, 35, 45, 55 (for 5-year renewable term insurance, information must also be given on the premiums to be charged at each of the next three 5-year renewal periods);
- (2) guaranteed cash surrender values, if any, at durations of 5, 10, 15 and 20 years;
- (3) for participating policies the dividends that the company would pay at each of durations 1 through 20 if the current scale of dividends were to be maintained (dividends, of course, are not guaranteed).

This information is sufficient to permit the calculation of most of the cost comparison indices that may be of interest to consumers.

Because of the volume of the data, it has not been published in this report. However, anyone interested can obtain this information in regard to any registered company by writing to the Department of Insurance, Ottawa, Ontario, K1A 0H2.

EXEMPLES DES PARTICIPATIONS

Dans les rapports antérieurs, on avait l'habitude de publier, en ce qui concerne chaque compagnie qui établit des polices avec participation, des renseignements relatifs aux primes prélevées et aux participations versées pendant l'année à l'étude, dans le cas des polices d'assurance-vie entière avec participation, des polices d'assurance-vie de 20 paiements et des polices d'assurance mixte de 20 ans, établies 3, 6, 9, 12 et 15 ans avant l'année à l'étude. Les chiffres relatifs aux polices émises aux âges de 25, 35, 45 et 55 ans ont été publiés. On avait demandé aux compagnies de fournir ces renseignements dans l'état annuel présenté au Département.

Lorsque le formulaire de l'état a été révisé en 1978, présentation des renseignements requis concernant les primes et les participations a été modifiée. Dans le cas d'une police d'assurance-vie entière avec participation de 10,000 \$, d'une police d'assurance-vie entière sans participation de 10,000 \$, et d'une police temporaire de 5 ans renouvelable et transformable de 100,000 \$, les compagnies devront maintenant fournir les renseignements suivants:

- 1) la prime annuelle prélevée sur les polices qui sont établies couramment aux âges de 25, 35, 45 et 55 ans (dans le cas de l'assurance temporaire renouvelable de 5 ans, des renseignements doivent également être fournis à propos des primes qui seront prélevées à chacune des trois prochaines périodes de renouvellement de 5 ans);
- 2) les valeurs de rachat en espèces garanties, s'il en est, aux échéances de 5, 10, 15 et 20 ans;
- 3) dans le cas des polices avec participation, les participations que la compagnie prévoirait verser à chacune des échéances allant de 1 à 20, si le barème actuel était maintenu (les participations, évidemment, ne sont pas garanties).

Ces renseignements seront suffisants pour permettre le calcul de la plupart des indices de comparaison des coûts qui peuvent intéresser les consommateurs.

En raison de la quantité des données, celles-ci ne sont pas publiées dans le présent rapport. Toutefois, toute personne intéressée peut obtenir ces renseignements dans le cas d'une compagnie enregistrée, en écrivant au Département des Assurances, Ottawa (Ontario), K1A 0H2.

PROVISIONS ACTUARIELLES

BASES OF VALUATION OF ACTUARIAL RESERVES

The coming into force of the new provisions relating to the determination of actuarial reserves during 1978 resulted in a number of changes in the manner in which actuarial reserves reported by registered companies were calculated. The summaries of assumptions and methods printed below for each company indicates, for each valuation basis used, the amount of reserve and the amount of insurance in force (amount of annual payment for annuities). At the beginning of the summary for each Canadian company, notes are provided giving additional details about the valuation assumptions and methods used by the valuation actuary in calculating the reserves for ordinary insurance policies, both participating and non-participating.

The notes preceding the summary for each Canadian company require some explanation because of the abbreviated terminology used to describe some of the methods employed. Given below is an explanation of the terminology used in the notes.

Method Used for Deferring Acquisition Expenses

In addition to the abbreviations used in previous years (such as NLP for net level premium), the summary notes given below include the expression "1978 Canadian". This denotes the deferment of acquisition expenses to the extent permitted by the methods specified in subsections 82(5) and 82(7) of the Canadian and British Insurance Companies Act. This method permits the deferment of acquisition expenses in an amount equal to the lesser of 150 per cent of a net level annual premium and the amount of acquisition expenses actually incurred. The amount of acquisition expenses deferred is further limited by the requirement that they must be able to be recovered from margins available in future annual premiums. The valuation actuaries of most Canadian companies chose to defer acquisition expenses to some extent when determining the actuarial reserves. It should be noted that many companies chose to employ the "replacement method" to provide for cash value deficiencies and negative reserves (see below) and this reduced considerably the effect on income of the deferments.

Withdrawal Rates

The notes that precede each valuation summary identify the table of withdrawal rates assumed by the actuary in the valuation of the major block of ordinary insurance business, separately for the participating and non-participating categories.

Where withdrawal rates from a commonly known table were used, the name of the table is indicated, for example, "Linton" or "Moorehead". "Nil" indicates that withdrawal rates have not been assumed in performing the valuation of the major block of a company's ordinary insurance business. In such cases, actuarial reserves held made adequate provision for cash values and negative reserves, most frequently through the use of the "replacement method" described below.

Provision for Cash Value Deficiencies and Amounts of Negative Reserves

Pursuant to subsection 82.1(3) of the Canadian and British Insurance Companies Act, the Minister has required that where the reserves determined by the valuation actuary for certain policies are negative or are less than the cash surrender value available under the policy, a special reserve equal to the aggregate of such negative reserves and deficiencies must be shown as a special reserve in the annual statement. The valuation actuaries for some companies used valuation assumptions and methods that produced reserves that were never negative nor less than the corresponding cash surrender values. The provision for cash value deficiencies and negative reserves for these companies is described in the notes as "precluded by methods and/or assumptions". A number of companies provided for cash value deficiencies and negative reserves by using what is described in the notes as the "replacement method". In determining the aggregate amount of actuarial reserves reported as a liability, companies using the "replacement method" substituted the cash surrender values for the calculated actuarial reserves at any duration where the calculated reserves were less and substituted zero for any negative reserves. Other companies provided for the cash value deficiencies and negative reserves by establishing a special reserve in the form of an appropriation of surplus.

Providing for Policyholder Dividend Expectations

Valuation actuaries have adopted a variety of different approaches when choosing valuation assumptions appropriate for participating business. For purposes of the notes, these have been described under two basic approaches.

(a) A number of valuation actuaries chose to calculate the actuarial reserves for participating policies by treating future dividends, which are not guaranteed, as a policyholder benefit to be discounted and reserved for in the same manner as the guaranteed death benefits. In such cases, the valuation assumptions chosen were usually close to, and perhaps more liberal, than those deemed appropriate for non-participating policies. The

assumptions were generally those inherent in the current dividend scale. This method is described in much of the actuarial literature as being the "explicit method". In the notes, this technique is identified under the label "valued as a specific benefit".

(b) Other valuation actuaries did not treat dividends as a specific benefit when calculating the reserve for participating policies. Instead, the actuarial reserves were determined by valuing only the guaranteed benefits using assumptions more conservative than those used for non-participating policies, thereby producing reserves that include margins from which future dividends may be paid. The assumptions used were frequently those on which the guaranteed cash surrender values are based. The notes describe this approach under the heading "provided from margins in valuation assumptions". This is basically the "implicit method" described in recent actuarial literature on the subject. Theoretically, if there is consistency between assumptions used in determining the dividend scale and the valuation assumptions, the "implicit" and "explicit" approaches to determining reserves for participating business should produce approximately the same aggregate result.

BASES D'ÉVALUATION DES PROVISIONS ACTUARIELLES

L'entrée en vigueur des nouvelles dispositions relatives à la détermination des provisions actuarielles de 1978 a entraîné un certain nombre de changements dans la façon de calculer les provisions actuarielles déclarées par les compagnies enregistrées. Les renseignements figurant aux pages suivantes sur les hypothèses et les méthodes utilisées pour déterminer les provisions actuarielles de chaque compagnie indiquent, pour chaque base d'évaluation utilisée, le montant de la réserve et le montant de l'assurance en vigueur (montant du paiement annuel au titre des rentes). Au début du résumé relatif à chaque compagnie canadienne, on trouvera des notes donnant des renseignements supplémentaires au sujet des hypothèses et des méthodes d'évaluation utilisées par l'actuaire responsable de l'évaluation dans le calcul des provisions relatives aux polices d'assurance ordinaire avec ou sans participation.

Les notes qui précèdent le résumé relatif à chaque compagnie canadienne doivent être expliquées en raison des abréviations employées pour décrire certaines des méthodes utilisées. On trouvera ci-après une explication des termes utilisés dans les notes. Les statistiques présentées ne s'appliquent qu'aux compagnies canadiennes, étant donné que, en règle générale, les compagnies britanniques et étrangères n'ont pas modifié leurs méthodes de détermination des provisions actuarielles de la même façon que les compagnies canadiennes.

Méthode de report des frais d'acquisition

En plus des abréviations utilisées au cours des années précédentes (comme N.L.P. pour prime ordinaire nette, dite "Net Level Premium"), les notes sommaires présentées ci-après comprennent l'expression "1978 Canadienne". Cette expression s'applique au report des frais d'acquisition dans la mesure permise par les méthodes précisées aux paragraphes 82(5) et 82(7) de la Loi sur les compagnies d'assurance canadiennes et britanniques. Cette méthode permet de reporter des frais d'acquisition équivalents au moins élevé des montants suivants: 150% d'une prime ordinaire nette annuelle ou le montant des frais d'acquisition réellement engagés. Le montant des frais d'acquisition reportés est de plus limité étant donné qu'il doit être recouvré à même les marges disponibles en ce qui concerne les primes annuelles à percevoir. Les actuaires responsables de l'évaluation de la plupart des compagnies canadiennes ont choisi de reporter dans une certaine mesure les frais d'acquisition lorsqu'ils ont déterminé les provisions actuarielles. La période d'amortissement des frais reportés variait considérablement. Il faut souligner que bon nombre de compagnies ont choisi d'utiliser la "méthode de remplacement" afin de prévoir l'excédent de la valeur de rachat sur les réserves et les réserves négatives (voir ci-après), ce qui a réduit considérablement les incidences sur le revenu des reports prévus.

Taux de retrait

Les notes qui précèdent chaque résumé d'évaluation désignent la table des taux de retrait prévus par l'actuaire dans l'évaluation de la principale tranche des polices d'assurance ordinaire; cette évaluation est effectuée distinctement pour les polices avec participation et sans participation.

Lorsque les taux de retrait d'une table généralement reconnue sont utilisés, le titre de la table est indiqué, par exemple "Linton" ou "Moorehead". L'expression "Néant" indique que l'on n'a pas prévu de taux de retrait dans le cadre de l'évaluation de la principale tranche des polices d'assurance ordinaire d'une compagnie. Dans ces cas, les provisions actuarielles détenues assuraient une provision suffisante pour les valeurs de rachat et les réserves négatives, le plus souvent grâce à l'utilisation de la "méthode de remplacement" décrite ci-après.

Provision pour l'excédent de la valeur de rachat sur la réserve et pour les réserves négatives

Conformément au paragraphe 82.1(3) de la Loi sur les compagnies d'assurance canadiennes et britanniques, le Ministre a demandé que, lorsque les réserves déterminées par l'actuaire responsable de l'évaluation à l'égard de certaines polices sont négatives ou inférieures à la valeur de rachat en vertu de la police, une réserve spéciale égale à l'ensemble de ces réserves négatives et de l'excédent de la valeur de rachat sur la réserve soit inscrite à titre de réserve spéciale dans l'état annuel. Les actuaires responsables de l'évaluation de quelques compagnies ont utilisé des hypothèses et des méthodes d'évaluation qui ont donné des réserves qui n'étaient jamais négatives ni inférieures aux valeurs de rachat correspondantes. Dans le cas de ces compagnies, les notes indiquent que les méthodes ou les hypothèses rendent "la provision pour l'excédent de la valeur de rachat sur la réserve et pour réserves négatives superflue". Plusieurs compagnies ont établi une provision pour l'excédent de la valeur de rachat sur la réserve et pour réserves négatives en utilisant ce que l'on appelle dans les notes la "méthode de remplacement". Dans le calcul du montant global des provisions actuarielles figurant au passif, les compagnies qui ont utilisé la "méthode de remplacement" ont remplacé les provisions actuarielles calculées pour toute durée par les valeurs de rachat lorsque les réserves calculées étaient inférieures et par zéro dans le cas de toute réserve négative. D'autres compagnies ont établi une provision

pour l'excédent de la valeur de rachat sur la réserve et pour réserves négatives en établissant une réserve spéciale sous la forme d'une affectation de l'excédent.

Provision pour les participations

Les actuaires responsables de l'évaluation ont adopté une gamme de méthodes pour choisir les hypothèses d'évaluation qui conviennent aux polices avec participation. Aux fins des notes, celles-ci ont été regroupées en deux méthodes fondamentales.

a) Un certain nombre d'actuaires responsables de l'évaluation ont choisi de calculer les provisions actuarielles relatives aux polices avec participation en traitant les bénéfices futurs, qui ne sont pas garantis, comme des prestations versées à un titulaire de police qui doivent être actualisées et mises de côté de la même façon que les prestations de décès garanties. Dans ces cas, les hypothèses d'évaluation choisies se rapprochaient habituellement de celles qui ont été jugées convenables pour les polices sans participation et étaient peut-être plus généreuses. En règle générale, les hypothèses étaient celles qui étaient inhérentes au barème actuel des participations. Cette méthode est décrite dans la plupart des publications sur l'actuariat comme la "méthode explicite". C'est ce qu'on appelle, dans les notes, la technique des participations à répartir "évalués de manière explicite".

b) D'autres actuaires responsables de l'évaluation n'ont pas traité les bénéfices comme une prestation particulière dans le calcul de la réserve au titre des polices avec participation. Ils ont plutôt déterminé les provisions actuarielles en n'évaluant que les prestations garanties grâce à des hypothèses plus conservatrices que celles qui ont été utilisées dans le cas des polices sans participation, ce qui a donné des réserves qui comprennent des marges à répartir desquels des participations peuvent être versées. Les hypothèses utilisées étaient souvent celles sur lesquelles se fondent les valeurs de rachat garanties. C'est ce qu'on désigne dans les notes par l'expression "prévus dans le choix des hypothèses actuarielles". Il s'agit fondamentalement de la "méthode implicite" décrite dans les récentes publications actuarielles portant sur le sujet. Théoriquement, s'il y a uniformité entre les hypothèses utilisées pour déterminer les barèmes de bénéfices et les hypothèses d'évaluation, les méthodes "implicite" et "explicite" utilisées pour déterminer les réserves au titre des polices avec participation devraient donner à peu près les mêmes résultats dans l'ensemble.

Where a mortality table has been modified by means of an age rating, the number of years that each age is rated up (+) or down (-) is shown in parentheses following the name of the table: e.g. 1937SA(-1) means the 1937 Standard Annuity Table with the age rated down one year.

Lorsqu'une table de mortalité a été modifiée par une augmentation ou une diminution d'âge le nombre d'années dont chaque âge a été augmenté (+) ou diminué (-) est indiqué entre parenthèses à la suite du titre de la table. Ainsi, 1937SA(-1) signifie 1937 Standard Annuity Table avec l'âge diminué d'un an.
